To Whom it May Concern,

In reference to the manufacturer's suggested cleaning guidelines for Dr. Brown's Medical products, please note a difference in suggested cleaning requirements when used in a hospital or clinical environment.

Handi-Craft Company, the manufacturer of the Dr. Brown's products, has suggested cleaning guidelines for products purchased in retail, and intended for home use, that include boiling for 5 mins prior to first use. It is understood this is not a practical cleaning option for hospital use, an equally suitable cleaning option for hospital use has been included in the attached document.

Dr. Brown's Medical products (bottle system and nipples) are a reusable bottle system and not intended to be used as a disposable product. The Dr. Brown's Medical team has taken into consideration the hospital/clinical environment and the ability to provide adequate cleaning of the Dr. Brown's products prior to first use and/or after each use. Cleaning guidelines are based on suggestions by the American Dietetic Association. * Reusable feeding products should be cleaned with soap and water, rinsed well, and air dried prior to first use; rinsed immediately after each use, cleaned with soap and water, rinsed well, and air dried; and consider sanitizing/sterilizing once every 24 hours. **ALL recommendations provided are intended to be used as a guideline for supporting individual hospital cleaning requirements and/or infection control policies and protocols.**

Thank you for allowing me the opportunity to share this information with you. We are very proud of our products and look forward to conducting business with you and your institution.

Sincerely,

Sandra J. Aubuchon
